## 1. Introduction

### 1.1 Project Background

The Transport Access Program (TAP) 3 is a NSW Government initiative delivering safe, modern and accessible public transport infrastructure for the Sydney rail network. The initiative includes improvements to the public transport customer experience by providing equitable access and modern facilities in and around station precincts for persons with limited mobility, parents with prams, improvements to station amenities, as well as incorporating additional staff and customer facilities.

The Sydney Metro – Western Sydney Airport project comprises a new 23km railway line that will link the new Western Sydney Aerotropolis business hub and Airport to the south with the rest of Sydney's public transport network via St Marys to the north. The project includes six new metro stations along the route including one at the Western Sydney Aerotropolis, two at the new Airport site, one at Luddenham, Orchard Hills, and St Marys.

This project will deliver design, procurement, construction, commissioning and integration of upgrades to existing stations on the Sydney rail network, including at St Marys (Figure 1).

Figure 1 – St Marys station (FSM) on the Sydney rail network

FSM works will provide facilities that:

- Are inviting and safe for customers to use
- Contribute to Commonwealth Disability Discrimination Act (DDA) related targets through Disability Standards for Accessible Public Transport (DSAPT) compliance upgrades (including associated customer benefits derived from DSAPT compliance)

- Are compliant with current standards of safety, access and amenity
- Are easy to operate and maintain by the Operator/Maintainer.

Provide safe, direct and continuous access paths within the site boundary between transportation mode change locations, accessible parking, passenger boarding points and other key facilities.

#### 1.2 Scope of Works Proposed

The Footbridge St Marys package scope of works includes:

- Construction of a new intermodal footbridge at the eastern end of the station, connecting the existing Sydney Trains St Mary's Station to the proposed Sydney Metro St Marys Station, with a new Northern Portal providing access to Harris St to the north.
- Construction of four new 27-person lifts providing step-free access from the footbridge to the existing station platforms.
- Construction of four new escalators for access from the footbridge to the existing station platform.
- Construction of two new staircases for access to the existing station platforms.
- Construction of the Northern Portal, providing access from the footbridge to Harris St via a new staircase and one 33-person lift.
- Construction of a three-storey Sydney Trains facilities building adjacent to the Northern Portal, including a new electrical main switch room, HVAC, communications room, and station staff facilities.
- Provision of new fire safety systems for the facilities building, lifts and footbridge.
- Regrading of platforms for accessible paths, localised to the proposed works.
- Replacement of existing platform tactiles
- Installation of new canopies to the proposed stairs, escalators, and footbridge.
- Alterations and additions to the existing lighting on Harris St to suit the new entry.
- Hard and soft landscaping to the station entrance and surrounds.

Figure 2 overleaf shows the indicative layout of the proposed intermodal footbridge.

Figure 2 – Indicative layout of the new Intermodal Footbridge St Marys indicative proposed footbridge construction

#### 1.3 Purpose

This Heavy Vehicle Local Roads (HVLR) report has been developed to address conditions E105 and E106 of the Ministerial Conditions of Approval related to the Critical State Significant Infrastructure of Sydney Metro – Western Sydney Airport.

This HVLR report identifies and assesses the heavy vehicle routes into the work areas and site compounds not identified in the Environmental Impact Statement (EIS). The road classification and the suitability of the routes are based on swept path analysis and adjacent land uses.

#### 1.4 Scope of this HVLR Report

The scope of this report is for the use of local roads by heavy vehicles required for the St Marys footbridge Works (FSM), which includes Local Roads under Penrith City Council.

- Australia Street between Hobart Street and Brisbane Street
- Brisbane Street between Glossop Street and Australia Street
- Hobart Street between Glossop Street and Sydney Street
- Forrester Road between Harris Street and Rail Corridor

The suitability of these routes is assessed based on the construction trucks up to 12.5m long Heavy Rigid Vehicle (HRV) that are expected to service the work/laydown compounds along Hobart Street and southern end of Forrester Road. Assessment will be conducted on several factors, which are:

- Swept Path Analysis (SPA)
- Road Dilapidation Surveys
- Road Safety
- Avoidance of Schools and School Zones where possible
- Avoidance of childcare and aged care centres.

It is important to note, due to the nature of the works, being a brownfield construction of the St Marys train station. There is very restricted access to the worksite. Works are completed by accessing the platforms via the rail tracks during Rail Possession weekends. The rail gates along Hobart Street are the closest accessible areas to the station during particular possession configurations. The possession works are generally restricted to Saturdays and Sundays, resulting in materials being delivered to these locations during the week prior to the possession, during the possession, and then removed in the following 2 weeks of the possession. Routes in the HVLR are anticipated to be used until June 2027, however will only be utilised 1 week prior and 2 weeks after possession weekends, which occur on average 6 times a year (spread across every 1-2 months). During these periods, the expected number of heavy vehicles per day is 15 over a 12-hour shift (i.e. approximately 1 HV movement per hour) to each laydown area.

The out-of-hour nature of the work requires that we issue notifications to residents within the area affected by our work. These notifications will continue throughout the life of the project.

The table below outlines the anticipated truck movements to and from Hobart Street Gates.

Table 2 - Vehicle Movements at Hobart Street Gates

|                        | 1   |      |     |       |           |           |   |      |           | Possession Weekend |      |     |       |     |     |     |     |      |         | _        |     |     |     |  |  |  |

### 2. Proposed Construction Truck Route and Local Roads

#### 2.1 Construction Site Layout

The St Marys footbridge site is located east of the St Marys Railway Station's platform. However, to support the construction activities, a primary work compound is proposed on the southern side of Harris Street, adjacent to St Marys Railway Station's northern commuter car park. This TAP 3 work compound borders the T1 Western Line rail corridor along its southern boundary. It would also host the Northern Portal of the proposed footbridge, providing access from the footbridge to Harris Street.

Two separate work compounds and one laydown compound are also proposed along Harris Street, at the southern end of Forrester Road, and within the railway corridor adjacent to Pacific National Pvt Road, respectively. The work compounds will be protected with a chain wire fence and shed cloth. All construction activities related to St Marys Footbridge will be contained within the TAP 3 work compounds.

Two separate laydown areas are also approved for use within the railway corridor along Hobart Street, and one laydown area along Pacific National Pvt Dr. These laydown areas will be used for material storage only.

In addition to the above, the existing site at 19 Harris Street will be used for construction worker parking. It is understood that only a limited number of parking spaces (approx. 16 spaces) will be allocated to Laing O'Rourke construction workers. Figure 3 below shows the site and work compound locations.

Figure 3 – Construction site and work compounds

### 2.2 Proposed Haulage Route within Local Roads

Generally, construction vehicles will have origins and destinations from a wide variety of locations throughout Sydney. However, all construction vehicles will be restricted to the State and Regional Road network as much as practically possible.

Transport Access Program 3 | Footbridge St Marys MCC | Contract No. ISD-18-7541-G © Laing O'Rourke 2023, all rights reserved Page 9 The proposed construction vehicle routes to and from the FSM main work compound are primarily based on the approved truck routes under the Sydney Metro Western Sydney Airport Construction Traffic Management Framework (CTMF).

However, for construction vehicle access to the laydown compounds along Hobart Street, at the southern end of Forrester Road, and within the railway corridor adjacent to Pacific National Pvt Road, construction trucks will be required to travel on the local roads, which are not approved under the Sydney Metro Western Sydney Airport CTMF.

Figure 4 and Figure 5 show the truck route to the proposed laydown compounds along Hobart Street and the southern end of Forrester Road using non-approved local roads.

A swept path assessment of relevant construction trucks accessing the laydown compounds via proposed truck routes is provided in Appendix 1 of this plan.

It is understood that after consultation with TTLG and TCG, proposed truck routes via local roads shall be approved by the Planning Secretary.

Truck drivers will be advised of the designated truck routes to/ from the laydown. No queuing or marshaling of trucks will be permitted on public roads in the vicinity of the site.

Accredited traffic controllers will ensure they are in radio contact with truck drivers, thus ensuring each vehicle's arrival is anticipated and planned. Such a process will be important in managing truck activity to ensure access to the construction site is available at all times and to remove any such likelihood of construction vehicles queuing and waiting along local roads.

Figure 4: Truck route from FSM main compound to laydown compound

Figure 5: Truck route to/from FSM compounds on the southern end of Forrester Road

#### 2.3 Traffic Guidance Scheme

Laing O'Rourke will implement temporary traffic management signage as per the Traffic Guidance Scheme presented in Appendix 2 of this HVLR.

The Site Manager/Supervisor will ensure:

- All road signs are used with approved stands or erected on posts set into the ground, where permitted by the relevant authorities
- All signs are placed in the most advantageous position, having regard for the nature of the hazard and the warning being conveyed to provide the maximum visual impact for approaching drivers.

Where signs are erected on posts set into the ground, the following applies:

- On kerbed roads, signs should be located back from the face of the kerb, not less than 300mm and no more than 1m. On urban roads that are not kerbed, the distances given for rural areas above should apply. The height of the sign should be about 2.5m above the kerb or footpath to reduce the interference from parked cars
- Where the signs are erected on temporary stands for short-term work, they should be erected on the road shoulder in un-kerbed areas no closer than 600mm to the running lane. In kerbed areas, the provisions outlined above for post-mounted signs shall be followed.

#### 2.4 Road Safety Audit

A road safety audit has been conducted for the local roads proposed to be used as truck routes by a suitably qualified and independent auditor with a Level 3 certification and another auditor with a Level 2 or higher certification.

The road safety audit is provided in Appendix 3 of this HVLR.

#### 2.5 Public Transport Network

S11 (St Marys to St Clair – Loop Service) is the only bus route that runs along Brisbane Street, which forms part of the proposed truck route using local roads. The bus route S11 operates with a limited frequency only during morning and afternoon peak hours.

Given the limited number of trucks on the proposed route and no proposed closure of the local roads or bus stops, the proposed truck route is unlikely to impact bus service running along Brisbane Street and other surrounding roads.

Any proposed Bus stop closure/ relocation or bus route change will be consulted in advance with relevant stakeholders and CJP.

#### 2.6 Pedestrian and cyclist routes

During construction, pedestrian movements along Hobart Street will be maintained at all times. Trained personnel will be made available as needed during construction hours to manage construction vehicle entry and exit and pedestrian movements at the site access, noting that pedestrian priority would be given.

To minimise disruption to pedestrian movements, it is advised that truck movements are managed, wherever possible, to occur outside of peak pedestrian periods.

During the project's lifetime, any changes or impacts on the current pedestrian footpath/ service will be analysed and presented to relevant stakeholders.

### 2.7 School zone

There are no school zones available along the local roads that are proposed to be use for the construction truck movements to and from the laydown compounds. Therefore, no significant impact is anticipated on the school zones in the surrounding area.

#### 2.8 Construction Traffic Generation

The largest vehicle regularly accessing the proposed laydown compounds will be a 12.5m HRV truck. FSM – Laing O'Rourke project estimates up to 15 heavy vehicles will be accessing the proposed laydown compounds in a midweek work day and 15 heavy vehicles per 12hr shifts during a weekend possession. It is anticipated that trucks will access both Laydown Compounds 1 and 2.

All construction vehicles associated with this project are required to adhere to specific criteria relating to conditions of approval.

This criterion includes:

- All construction vehicles would enter and exit construction sites in a forward direction, where feasible and reasonable. Where this is not possible, traffic management must be in place under approved CTPMP's, TGS's and Road Occupancy approvals.
- Construction vehicles will be managed to minimise movements during peak periods and in school zones.
  HV deliveries will be instructed via toolbox /prestart to ingress/egress on the proposed site during non-peak hours and current school times.

 Construction vehicles will not be permitted to park or queue within the surrounding road network unless the Council permits them to do so. Arrival of vehicles will be staggered to prevent queuing of vehicles related to the project.

In addition:

- Vehicles must have rotating beacons that must be activated on approach and departure from work sites
- Heavy vehicles used for spoil must be identified/marked with the project number and company.
- Radio or phone ahead to ensure works sites are open and accessible
- Always give way to pedestrians
- Clearly signal intentions by indicating to traffic streams to enter or depart work sites.
- Construction traffic records in real-time will be implemented as part of Laing O'Rourke's proposed strategies
- Monitoring records will be maintained as part of Laing O'Rourke construction traffic generation
- Delivery of material that is required to be delivered outside of standard construction hours in Condition E41 to directly support tunnelling activities can be executed except between the hours 10:00 pm and 7:00 am to/ from the Orchard Hills ancillary facility.

### 3. Dilapidation

#### 3.1 Dilapidation report

Prior to the use of local roads by heavy vehicles associated with the works, a road dilapidation survey has been completed and provided to Sydney Metro – Western Sydney Airport and Penrith City Council.

Road dilapidation surveys were completed on 04 August 2023 and the report was provided to Penrith City Council.

As per Condition of approval E 108, if damage to roads occurs as a result of the construction of Stage 1 of the CSSI, the Proponent must either (at the Relevant Road Authority's discretion):

(a) compensate the Relevant Road Authority for the damage so caused; or

(b) rectify the damage to restore the road to at least the condition it was in pre-work, as identified in the Road Dilapidation Report.

The dilapidation reports of local roads to be used for truck routes are provided in Appendix 4 of this report.

### 4. Communication Strategy

A comprehensive campaign will be launched to inform the public of the Laing O'Rourke/FSM works and to try and influence travel behaviour and trip planning. The FSM engagement strategy aims to inform and engage the community and relevant stakeholders (CJP /TfNSW & Council) in a constructive, transparent and fair process. To ensure this occurs, detailed and timely information will be provided to the TfNSW comms team to assist with fulfilling the consultation and notification requirements and incorporation into similar notifications for any relevant, adjoining works. This communication strategy has been created following an Overarching Community Communication Strategy.

Prior to undertaking any works associated with the partial closure of any road or footpath or any other interaction with transport infrastructure, the following stakeholders must be appropriately considered for consultation in relation to the road occupancy to ensure that all requirements are addressed.

As part of the disseminating of the CTPMP to the greater travelling public, the Laing O'Rourke Communication team will provide TfNSW content to be distributed for the media forms outlined in Table 3.

| Communication Method  | Footbridge St Marys |
|---|---------------------|
| Community notice (including notification to local business and residents) | ✓                   |
| Precinct update – e update  |                     |
| Email   | ✓                   |

| Radio advertising   |                     |
| Variable Message Signs (if required)                                      | $\checkmark$        |
| Advanced warning signs  | $\checkmark$        |
| Local business open signs   |                     |

Table 3: Proposed communication

Penrith Council/CJP, being a key stakeholder, will be forwarded a copy of this HVLR and will be routinely consulted via TCG /TTLG Sydney metro meeting and informed of upcoming works, any expected site access changes, and temporary lane occupation or road closures.

## 5. Summary

A review of swept paths has been reviewed and tabled (table 5) as per below: Table 4: Turn path summary

| Swept Path / Drawing                  | Turn Path<br>Description   | Heavy<br>Vehicles           | Determination  |

| N273- SP07<br>N273- SP08<br>N273-SP09 | Forrester Road<br>and Pacific<br>National Pvt<br>Road                              | 12.5m single-<br>unit truck | Suitable <u>ONLY</u> with traffic<br>control as required for<br>managing ingress/egress<br>construction vehicle<br>movements |

#### 5.1 Advice From the Author

Based on the above assessment, swept path analysis has shown that there are some minor issues with some of the proposed heavy vehicle routes due to lane cross and site access.

Minor issues can be mitigated with the implementation of temporary traffic management measures as shown in the Traffic Guidance Scheme provided in Appendix 2 of this report.

As an appropriately qualified professional and having reviewed and compiled this document, I am satisfied that the requirements of conditions E105 and 106 have been met, specifically noting:

a) Swept path analysis of the surrounding local roads has been undertaken.

b) The report identifies the local road areas that may be problematic for larger vehicles and provides reasonable mitigations (either suggesting a more appropriate route or the use of short-term traffic control)

c) The routes proposed in the report sufficiently avoid aged care facilities and ensure that school speed restriction on Forrester Road and Sydney Street is followed during their peak operation.

Based on the above, it is my conclusion that provided the mitigation measures are implemented, as noted in the report, the proposed heavy vehicle routes are suitable for the work.

Therefore, the proposed heavy vehicle route is considered suitable for use and is recommended for approval.

### 6. Consultation with Stakeholders

During the development of CPTMP, HVLR report and CWPS, consultation with relevant stakeholders including Sydney Metro Western Sydney Airport, TfNSW, and Council, have been made on various occasions.

Appendix 5 of this report provides the comments received from the stakeholders upon review of of Revision E of the HVLR report and responses from Laing O'Rourke accordingly.

It is important to note that this HVLR report has progressed since the initial rounds of consultation, and Laing O'Rourke's responses may no longer be directly applicable. As such, the consulting evidence is attached to show the progression of the consultation process only.

This section will further be updated upon review of this updated document by relevant stakeholders.

**HEAVY VEHICLE LOCAL ROAD - RSA** 

LAING O'ROURKE

TAP3 – FOOTBRIDGE ST MARYS MCC

## 1. Introduction

### 1.1 Purpose of Audit

This report presents findings of a Pre-construction Road Safety Audit. The audit reviewed the proposed local road use by heavy vehicles as outlined in the HVLR document. It will also review the associated swept paths, Traffic Guidance Schemes and associated documentation in relation to the local road use as part of the project.

The audit is conducted to verify the implemented site arrangement for the works, and within the specified area affected by the project works. The audit scrutinizes the 'safe system' approach to road design and the traffic management planning, targeting roadside hazards including (but not limited to) signage and pavement marking, pedestrian & cyclists' facilities, delineation, sight distances, intersection controls and safety barriers.

The site being audited covers the areas affected by changes, including the removal of the traffic blisters and islands and the installation of road plates on Grand Avenue. The areas that are the subject of this audit is the red area shown in Figure 1, below;

Figure 1: Road Safety Audit Scope [Source: Google]

## 1.2 Audit Objectives

The objective of this road safety audit was to identify relevant road safety deficiencies in the site which, if addressed, would improve safety for road users.

The other objectives of this Road Safety Audit were to:

### HEAVY VEHICLE LOCAL ROAD - RSA LAING O'ROURKE

TAP3 – FOOTBRIDGE ST MARYS MCC

- Check the compatibility between the traffic management's safety features and the functional classification of the roads.
- Identify any design feature's that can, either now or with time, create a traffic safety issue.
- identify additional design's features at the site that pose a safety hazard or risk to any of the road users
- Determine the extent of the deficiencies in the design, considering all road user groups.

### 1.3 Procedures and reference material

The procedures used are those in the Austroads Guide to Road Safety Part 6: Road Safety Audit (2022) and RTA Guidelines for Road Safety Audit Practices 2011.

Technical reference documents for Traffic Guidance Schemes is the Traffic Control at Worksites Manual (TCAWS) Version 6.1, 2021.

### 1.4 Audit Team

This Audit Team consisted of:

- a) Alex Gosper (Civlink Consulting Director / Traffic Manager / Senior Civil Engineer). Alex is a registered Road Safety Auditor with the Institute of Public Works Engineers Australia, NSW and Senior auditor in both VIC & QLD. Alex is a registered Level 3 Road Safety Auditor in NSW.
- b) **Sue Lewis** (Sue Lewis Consulting Pty Ltd) Sue has 20+ years experience in the traffic industry, with significant experience working on some of the largest infrastructure projects in Australia. Sue is a Level 2 Road Safety Auditor in NSW.
- c) Declan C Mc Garry (CGU) Declan has more than 5 years experience working in traffic management roles across a number of significant infrastructure and upgrade projects in NSW. Declan is a Level 1 Road Safety Auditor in NSW.
- d) **Abdullah Khan** Abdullah has more than 7 years' experience in the traffic industry across a number of State Significant Infrastructure projects in NSW. Abdullah is a Level 1 Road Safety Auditor in NSW.

### 1.5 Statement of Independence

The audit team are independent from the design team and have not been involved in the development of the traffic strategies selected for implementation on this project and site. The audit has been carried out independently of the design team in accordance with Austroads Guide to Road Safety; Part 6 – Road Safety Audit and NSW Centre for Road Safety: Guidelines for Road Safety Audit Practices.

## 2. Road Safety Audit Program

### 2.1 Commencement Meeting

Wednesday the 29<sup>th</sup> of November a commencement email was received from Sue Lewis requesting an audit be conducted on the Heavy Vehicle Local Road (HVLR) report to support the use of local roads within the Penrith Council area at St Marys as part of the TAP3 St Marys station upgrade. The audit was to be conducted by Alex Gosper, Lead Road Safety Auditor (Civlink Consulting) with the assistance of Sue Lewis, Abdullah Khan and Declan McGarry. The audit was to be conducted on the swept paths, traffic guidance schemes and proposed scope included within the HVLR document from the Project.

**HEAVY VEHICLE LOCAL ROAD - RSA**

TAP3 - FOOTBRIDGE ST MARYS MCC

## 2.2 Completion meeting

Project representatives are to advise of the need for a Completion meeting.

### 2.3 Responding to the audit report

The responsibility for the design and implementation of this project rests with the client's project management team, not with the auditors. The project manager is under no obligation to accept the audit findings. Also, it is not the role of the auditor to agree or to approve the project manager's responses to the audit. Rather, the audit provides the opportunity to highlight potential road safety problems and have them formally considered by the project manager or design manager in conjunction with all other project considerations.

### 2.4 Corrective action response

The road safety audit is a formal process. The road safety audit report is by no means the end of the audit process. The audit report documents the audit teams' identified concerns made to improve the safety of the roads. This report must be responded to by the client with a written response to each audit finding.

### 2.5 Disclaimer

The findings and opinions in the report are based on the examination of the site and might not address all concerns existing at the time of the audit. The auditors have endeavoured to identify features of the site that could be modified or removed in order to improve safety, although it must be recognised that safety cannot be guaranteed since no road can be regarded as safe.

The problems identified have been noted in this report and should be considered for improving road safety. Where corrective actions are not taken, this should be reported in writing, providing the reason for the decision. Readers are urged to seek specific advice on matters and not to rely solely on this report. While every effort has been made to ensure the accuracy of this report, it is made available strictly on the basis that everyone relying on it does so at their own risk without any liability to the Auditors.

## 3. Risk Assessment Approach

This audit identified and rated risks per the Austroads recommendation using the assessment process below. Potential safety hazards were identified and categorised based on the frequency of occurrence and severity (consequence of crash). A preliminary risk rating for each identified issue has been assigned in Section 4 which were determined via a subjective judgement by the Auditor guided by the Austroads "Guide to Road Safety, Part 6: Road Safety Audit".

Austroads' provides an indication of the level of risk and what response may be appropriate – refer to the tables below.

## 3.1 Likelihood

|                | Description   |
|----------------|---|
| Almost Certain | Occurrence once per quarter                                 |
| Likely         | Occurrence once per quarter to once per year                |
| Possible       | Occurrence once per year to once every three years          |
| Unlikely       | Occurrence once every three years to once every seven years |
| Rare           | Occurrence less than once every seven years                 |
|                |   |

### 3.2 Severity

|               | Description  |
|---------------|--|
| Insignificant | Property damage  |
| Minor         | Minor first aid  |
| Moderate      | Major first aid and/or presents to hospital (not admitted) |
| Serious       | Admitted to hospital                                       |
| Fatal         | At scene or within 30 days of the crash                    |

## 3.3 Risk Rating

|     |                | Severity      |            |          |         |         |
|-----|----------------|---------------|------------|----------|---------|---------|
|     |                | Insignificant | Minor      | Moderate | Serious | Fatal   |
| σ   | Almost Certain | Medium        | High       | High     | Extreme | Extreme |
| Ö   | Likely         | Medium        | Medium     | High     | Extreme | Extreme |
| lih | Possible       | Low           | Medium     | High     | High    | Extreme |
| ike | Unlikely       | Negligible    | Low        | Medium   | High    | Extreme |
|     | Rare           | Negligible    | Negligible | Low      | Medium  | High    |

### 3.4 Treatment

| Risk       | Suggested treatment approach  |  |
|------------|---|--|
| Negligible | Negligible No action required   |  |
| Low        | Should be corrected or the risk reduced if the treatment cost is low                                  |  |
| Medium     | Should be corrected or the risk significantly reduced, if the treatment cost is moderate but not high |  |
| High       | Should be corrected or the risk significantly reduced, even if the treatment cost is high             |  |
| Extreme    | Must be corrected regardless of cost  |  |

## 4. Audit Findings

| lo. | Location / Document re | ference Description of Deficiency / Observation   | Risk level                                |
|-----|------------------------|---|---|
| 1   | N273-HVSP01            | The proposed 12.5m swept path for trucks entering and exiting Brisbane Street from Glossop Street encroach into the opposing lane.<br>Trucks exiting Brisbane Street and heading south should have limited issues as they can await for two   | Likelihood – Unlikely<br>Severity – Minor |
|     |                        | lanes to be clear, however the entering vehicle shows an impact on the westbound Brisbane Street traffic.   | Risk Rating – Low                         |
|     |                        | Although unlikely, this may increase the likelihood of some low speed side-swipe type collisions. It is noted that the movements will primarily be outside of peak periods and school pickup and drop-off which is reflected in a reduced likelihood.   |   |
| 2   | N273-HVSP01            | The proposed 12.5m swept path for trucks turning left into Australia Street from Brisbane Street heading westbound (similar to item 1) encroach into the area of road for opposing traffic. This movement requiring the full road width may increase the likelihood of some low speed side-swipe type collisions. | Likelihood – Unlikely<br>Severity – Minor |
|     |                        | It is noted however that this section of Australia Street is not line marked and appears to carry very low volumes of traffic which will reduce the likelihood of an impact and is reflected in the likelihood.   | Risk Rating – Low                         |

| HE/ | AVY | VEHICL | E L | OCAL | ROAD | - RSA |
|-----|-----|--------|-----|------|------|-------|
|     |     |        |     |      |      |       |

LAING O'ROURKE

TAP3 – FOOTBRIDGE ST MARYS MCC

| 3 | N273-HVSP02 | The swept path for entry proposes a forward in movement to the compound / laydown. The exit also suggests a forward movement to exit. It is unclear if it is possible to be able to u-turn or achieve a 3-point turn with a 12.5m truck in the corridor proposed (without impacting or driving on the rail formation).                                      | Note only |
|---|-------------|---|-----------|
|   |             | Should the drivers need to reverse onto the road, it may pose some additional challenges with the interface with traffic. Alternatively, where they opt to reverse within site, and drive out forwards, it may see the trucks perform differently when exiting site.  |           |
|   |             | It is noted however that traffic control will be in place so these configurations are unlikely to exacerbate any existing safety risks.   |           |
| 4 | N273-TGS03  | General note – The TGS speed reduction signs are only single signs. These are typically duplicated or repeated in accordance with Section 4.5.5 of the TCWS Version 6.1   | Note only |
| 5 | N273-TGS03  | General note – The TGS proposes the use of manual traffic controllers. It is unclear from the plans if this has been demonstrated to be a safer outcome than PTCDs in accordance with TCWS.   | Note only |
| 6 | N273-TGS03  | General note – Where manual traffic controllers are demonstrated to provide a safer outcome than PTCD, TCWS requires four (4) cones be placed in advance of the traffic controller (either in the centre of the road or immediately in advance of the traffic controller in the shoulder, or both). This doesn't appear to be included on the traffic plan. | Note only |

**HEAVY VEHICLE LOCAL ROAD - RSA** 

LAING O'ROURKE

TAP3 - FOOTBRIDGE ST MARYS MCC

#### 5. Conclusion

The report outlines where potential deficiencies have been identified for consideration by the project manager, designer and/or engineer.

The findings and opinions in the report are based on the examination of the planning documents and site at St Marys as part of the TAP3 station upgrade works. The Auditors have endeavoured to identify features of the arrangement that could be modified or removed to improve safety, although it must be recognised that safety cannot be guaranteed since no road can be regarded as safe. While every effort has been made to ensure the accuracy of this report, it is made available strictly on the basis that anyone relying on it does so at their own risk without any liability to the Auditors.

## 2 EXECUTIVE SUMMARY

#### 2.1 Inspection Brief

The survey involves capturing high resolution 360 imagery within specific areas, as per scope of works.

Any cracks and/or defects captured from the initial survey can be reassessed periodically (if necessary) to detect any further movement or change in conditions.

#### 2.2 Data Capture

A road condition surveys was undertaken with the utilization of a 360-degree spherical camera mounted to the roof of a vehicle. The georeferenced spherical imagery was captured at traffic speed and at various intervals along the road corridor as per scope of works.

Data captured is delivered as geotagged high-resolution photographic imagery.

The data is provided in a web based online viewer (similar to Google Streetview), and no additional software is required to view.

#### 2.3 Navigating through the Virtual Tour

The dataset can be navigated through the virtual viewer provided, simply clink on the URL link in section 10 to view.

Photographs can be zoomed, panned and rotated allowing investigation of any areas along the corridor.

A location map is also provided with a pin for each photo representing its location.

#### 2.4 Conditions and Defects Observed

For definitions of defects used throughout this report refer to item 4.1 Definitions of Defects.

A tabulated list of observed defects has been prepared identifying location, node number (relating to the 360 virtual tour) and comments of defects.

## **3** ASSUMPTIONS AND EXCLUSIONS

#### **3.1** Weather Conditions

The survey was undertaken on the date as specified within this report and in prevailing weather and environmental conditions.

#### 3.2 Exclusions

Defects and existing conditions within this report may exclude:

- Inaccessible areas
- Defects not apparent at the time of the inspection
- Defects only apparent in different weather or environmental conditions
- Minor defects (such as super fine hairline cracking) which may be difficult to observe
- Defects outside the scope of works

#### 3.3 Access

Consent to access any private land and or structures was obtained from the appropriate persons prior to entry. In cases where access to specific areas/rooms were denied, no survey within this area has been undertaken and a note will be made within the report.

All surveys were undertaken from a reasonable distance to any moving vehicles, machinery, plant, equipment and/or any other possible dangers.

Some areas may be restricted in visibility due to:

- Traffic conditions
- Road closures
- Parked vehicles/pedestrians
- Obscured by trees and/or other objects
- Obscured by furniture, blinds and/or other fittings or fixtures
- Locked rooms or areas
- Height or depth of structures

#### 3.4 Unless Otherwise Specified

- No soil, etc. has been excavated nor has any investigation of sub ground drainage been made
- No special investigation of insect, asbestos or soil contamination has been made
- No plant, trees, fixtures, cladding, or lining materials have been removed for further investigation
- No items of furniture or chattels have been moved whilst conducting the survey
- No access to roof, roof space or subfloor has been made
- No inspection to frame work or footings has been undertaken
- No underground services have been inspected

#### 3.5 Sole Use of Client

This report is provided solely for the use of the persons named within this report and no responsibility to other persons is accepted.

#### 3.6 Report Reproduction

Any reproduction of this report must be done so in its entirety.

#### 3.7 Disclaimer

Land Surveys has attempted to show all obvious visual defects, however, cannot guarantee all dilapidation has been identified and has no accountability for any omissions.

The survey only covers the status of the site at the time of inspection. Land Surveys does not accept any liability of damages caused to any properties or structures after site inspection. Land Surveys also accepts no responsibility for any amendments or additions made to the report after delivery.

Land Surveys staff members are not structural engineers or registered building surveyors and are not in a position to comment on the causes of damage or assess any future damages. Land Surveys makes no evaluation on property or structures in terms of its structural stability, with the contents of this report intended as a visual reference only.

# 4 DEFECT DEFINITIONS AND CLASSIFICATIONS

The following definitions and classifications may be used throughout this report to describe the general condition of various features, surfaces or structures. They are to be used as a guide only and are not an exact.

The photography taken is for record purposes only. Land Surveys make no comment or inference regarding the cause of dilapidation or the potential impact or effect of dilapidation.

#### 4.1 Definitions of Defects

| Defect Type               | Definition  |
|---------------------------|---|
| Blistering                | A bubbling effect often caused by heat, moisture or chemical  |
| Chipping                  | Section of a surface that has broken away   |
| Corrosion                 | Degradation of a metal caused by its environment  |
| Corrugation Defect        | Formation of ripples across a surface   |
| Cracking                  | A break/split in a surface or structure without complete separation                                     |
| Damage                    | Generic term for something that has been broken, smashed, crushed or ruptured                           |
| Depressions               | Concave deformation of a surface  |
| Deterioration             | Progressively worsening   |
| Deviation                 | Variation within a surface or structure   |
| Discolouration            | Change in hue or visual appearance to a material  |
| Displacement/Misalignment | Incorrect position or placement of a structure or surface   |
| Efflorescence             | The formation of salt/crystalline deposit on surfaces of masonry, stucco or concrete                    |
| Gouges/Scuffs/Dints       | Indentation, groove or scrape to a surface  |
| Ground Subsidence         | Sinking or settling of the grounds surface  |
| Moss/Mould Buildup        | Gradual accumulation of an algae/fungus on a surface  |
| Patching                  | Surface that has been repaired  |
| Patching Failures         | Repaired surfaces that show signs of reoccurring distress   |
| Peeling                   | The outer layer or skin detached from its surface   |
| Ponding                   | Water or other liquids forming a small body of standing water   |
| Pothole                   | Bowl shape depression in a pavement as a result of the loss of the pavement surface                     |
| Ravelling                 | Progressive disintegration of a pavement surface through loss of both binder and aggregate              |
| Rust                      | A red/orange/brown flaking coating of iron oxide that is formed on metal by oxidation                   |
| Rutting                   | Longitudinal vertical deformation of a pavement surface in a wheel path                                 |
| Separation/Delamination   | A break, split or variation between various surfaces or structures                                      |
| Shape Loss                | Generic term for a number of defects including; corrugations, depressions, shoving                      |
| Shoving                   | Convex deformation of a surface   |
| Spalling                  | Result of water entering brick, concrete or stone and forcing the surface to peel, pop out or flake off |
| Stripping                 | Loss of aggregate within a pavement surface, resulting in exposed binder and/or pavement                |
| Water Ingress/Damage      | Water or liquid entering a surface or structure/causing damage  |
| Weathered                 | Worn by long periods of exposure to natural elements  |

### 4.2 Crack Type

| Crack Type   | Definition  |
|--------------|---|
| Longitudinal | Cracks that run along the length of a carriageway/path. It can consist of a single crack or a series of parallel cracks                                       |
| Transverse   | Cracks that run perpendicular to the carriageway/path. It can consist of a single crack or a series of parallel cracks  |
| Lineal       | Cracks running in a direct line. It can consist of a single crack or a series of parallel cracks  |
| Reflective   | Cracks that occur directly over joints or cracks in a concrete pavement or overlay of a deteriorated asphalt pavement due to the movement of the old pavement |
| Slippage     | Cracks forming the shape a crescent or half-moon, generally having two ends pointed into the direction of traffic.  |
| Edge         | Cracks that appear on the edge of a road or path  |
| Crocodile    | Interconnecting or interlaced cracking, resembling the hide of a crocodile  |
| Block        | Interconnected cracks that divide the surface up into rectangular pieces  |
| Craze        | A network of cracks running in various directions   |
| Pattern      | Cracks that are part of a network of cracks that form an identifiable grouping of shapes  |
| Vertical     | Cracks that are parallel to the vertical direction  |
| Horizontal   | Cracks that are parallel to the plane of the horizon  |
| Diagonal     | Cracks running crossways across a surface of structure  |
| Step         | The crack pattern follows the mortar joints between masonry units in a stair stepping pattern   |
| Cogged       | The crack pattern follows the mortar joints between masonry units in a vertical rotational pattern  |
| Joint        | Lineal cracks that run along the connection of construction joints, expansion joints, isolation joints and at the junction of structures and forms            |
| Various      | Generic term for a combination of several crack types   |

#### 4.3 Crack Classification

| Crack Width (mm) | Crack Classification (Class) |
|------------------|------------------------------|
| <0.1             | 0                            |
| 0.1-1            | 1                            |
| 1-5              | 2                            |
| 5-15             | 3                            |
| 15-25            | 4                            |
| >25              | 5                            |

## 5 REPORT REVIEW AND ACCEPTANCE

Location of Survey:

- Hobart street
- Australia Street
- Sydney Street
- Brisbane street

Date of Survey: 04/08/2023 Survey conducted by Land Surveys

#### 5.1 Client Acceptance

I accept that this report is true and a correct record of conditions.

Signature of Client Representative

Full Name of Client Representative

Date

## 6 INTRODUCTION

Land Surveys has been contracted by Laing O'Rourke to undertake a dilapidation survey and existing condition report of structures adjacent to P204St Marys TAP3, prior to the commencement of any construction works.

# 7 SCOPE OF WORKS

The survey involves capturing high resolution 360 imagery of existing conditions and observed defects located at:

- Hobart street
- Australia Street
- Sydney Street
- Brisbane street

## 8 SITE CONDITION & GENERAL OBSERVATIONS

| Date of Survey      | 04/08/2023  |
|---------------------|---|
| Survey Type         | 360 Virtual Tour of Road Corridor                   |
| Site Conditions     | Pre-Construction                                    |
| Weather Conditions  | Dry, Sunny  |
| Lighting Conditions | Ideal   |
| Significant Trees   | Significant Trees within 10 Metres of Road Corridor |
| Ground Conditions   | No Major Faults Observed                            |
| Access              | All Areas Accessed                                  |

| Project ID:     | ISD-18-7541-G MC Footbridge St Marys (FSM)          |
| Document title: | Construction Traffic and Pedestrian Management Plan |
| Revision:       | в   |
| Date:           | 25/05/2023  |

LORAC Overarching comment: The CTMP is to be formally submitted to relevant local government authority (PCC) and stakeholders via TeamBinder, as per the process outlined in the SMWSA Construction Traffic Management Framework (CTMF) 150511-STM-PM 1 стмр А Paul Kim 31/03/2023 PLN-00015 CTMP formally submitted via teambinder on 4/05/2023 to be 9/05/2023 submitted onwards. aul Kim 21/06/23 an is not approved as per TCAWS Table 3.5, where the Developer, Reviewer & Approvers are required to have he plan is now prepared and the appropriate PWZTMP accreditation issued by pproved by appropriated and pproved by appropriately qualified versonnel with PWZTMP vcreditation. (see CTPMP wuthorisation section in the plan) the appropriate PW2/1MP accredition issued by SafeWork NSW. Evidence of this has not been provided. Note that the template being used has been superceded elsewhere by LORA and is inconsistent with Versions 4.2, 5.0, 6.0 & 6.1 of TCAWS. Non-compliant with TfNSW 150511-STM-PM-Document Revision History & Sign Off K.Leehy TCT0105299 2 CTMP в RD 23.06.2023 PLN-00015 6/11/202 pact on Traffic Flow - does not appear to have follow the TCAWS assessment requirements in TCAWS Section 3 with data collection, options assessment and 150511-STM-PM-K.Leehy TCT0105299 Refer to Section 4.1 of the updated 3 CTMP в RD 2.3.1 23.06.2023 with data collection, options assessment and recommendations to support the proposed HighRisk controls, mitigation and methodology. The contention of 'no intricate Traffic Management Strategy required" PLN-00015 CTPMP eds to be supported. Non-Compliance. 6/11/202 AS1742.3-2009 has been superced by AS1742.3-2019, the reference in "Compliance" does potentially indicate aspects of why the TTMP has issues. Non\_Compliance. Note : This document maps the content from the superseded AS1742.3 (2009) to either the revised standard AS1742.3 (2019) or Austroads Guide to emporary Traffic Management. The 2019 update of \$1742.3 by Standards Australia resulted in the remova 1.22 Legislation / Guidelines & Standards 150511-STM-PM-K.Leehv of content from the 2009 standard that was determined to be guidance material. This guidance material has 4 CTMP В RD 23.06.2023 ow updated (see section 1.2.2) TCT0105299 PLN-00015 en substantially transferred into the Austroads Guide o Temporary Traffic Management and expanded based in information from Austroads member organisations. To help stakeholders understand these changes, the ontent from AS1742.3 (2009) has been mapped to ntify the new location of this content in either 1742.3 (2019) or Guide to Temporary Traffic 6/11/20 All the accreditions are now under 150511-STM-PM-K.Leehy TCT0105299 СТМР RD 23.06.2023 RMS no longer exists. Are the Road Safety Auditors 5 в Appendix 3 TfNSW. The Road Safety Auditors are PLN-00015 TfNSW accredited? 6/11/2023 TfNSW accredited lease review the updated plan, 150511-STM-PMwept paths and TGSs provided in K.Leehy 6 RD 23.06.2023 CTMP в Appendix 3 PLN-00015 TCT0105299 ith the issues raised by the RSA, LORA have indicated Appendix 3 & and 4 of the updated se-out, that is not supported with Traffic Guidance nemes ? No evidence of compliance provided. TPMP 6/11/202 the "Local Access Plan" for LORA Construction Vehicle K.Leehy ICT0105299 150511.STM.PM e section 4.5 and 4.6 of the 7 стмр RD Appendix 4 23.06.2023 ccess, then vehicle restrictions, vehicle equipment etc so needs to be defined (like flashing amber beacons, R PLN-00015 dated CTPMP -tonal reversing alarms etc for safe egress and trans 6/11/2023 The TGS shows no sign-off for "TGS Drawn By", is however approved by PW2 TMP TCT1008290.
